## 1 Zones

Zone	Elements
1	web
2	SMTP
3	I2
4	PDNS
5	DHCP_R2, U2
6	DHCP, SSH, HTTP, LDNS
7	RSYNC
8	DHCP_R1, I1, U1
9	Internet

## 2 Rules

At FW2 we configured the NAT table as follow :

- For outgoing traffic, we used MASQUERADE in order to have dynamic mappings.
- For incoming traffic, we based ourselves on the destination port. For example, the port 22 meant that the destination had to be replaced by SSH address with DNAT. Only the servers are available.
